

Ferrogranul 20

A highly soluble ferrous sulphate powder that can be sprayed on to turf to deter moss, reduce disease and green up and harden turf.

A water-soluble 20% iron that can be applied at low water volumes and tank-mixed with most liquid fertilisers, water-soluble fertilisers and growth regulators.

- Cost-effective way to improve colour of all turf surfaces
- A tank-mix of Ferrogranul 20 and Maintain NT gives an excellent combined colour boost and growth control application.
- Low application rates and low water volumes means large areas can be sprayed quickly and economically.
- Reduces disease activity and deters moss and worms.

Ferrogranul 20

- Improve aesthetic appearance of fairways without stimulating unwanted lush growth that increase thatch development and disease occurrence.
- A tank mix with a growth regulator will both improve appearance and save money on repeated mowing during periods of high growth.
- Can be used on all turf mown above 7mm.
- Premium formulation product in a fine powder that is designed for easy mixing and spraying with no blocked nozzles when mixed correctly.
- Flexible application rates from 10 – 50kg/ha.

- Do not apply in hot, dry weather, always lightly water in.
- For most efficient mixing and solubilisation, mix product with warm water before adding to a half-filled spray tank with continuous agitation.
- Where no warm water is available, mix slowly, adding to a half-filled tank and agitate for 10 minutes before spraying.

Issue	Suggested Solutions
Golf greens, tees and approaches needing a colour boost and suffering from moss, worm casts.	Apply Ferrogranul 20 at 25 – 50kg/ha in spring to knock back moss and acidify soils to help prevent worm ingress. Repeat the treatment in autumn if required, but do not over-apply iron to fine turf areas.
Fairways and sports pitches needing growth regulation, improved colour with moss and worm cast reduction.	Apply Ferrogranul 20 at 25 – 50kg/ha + Maintain NT at 1 litre/ha every 4-6 weeks or as required.
