ADVANCE GRASS SOLUTIONS

Summer Stress Reduction

Two AGS exclusive packs designed to reduce turf stress and prevent anthracnose during the demanding summer months.

The product combinations will maximise turf health, improve visual merit and support the plant to be at it's optimum in challenging conditions.

There are two packs available to suit customer preference:

PACK 1

Granular + Liquid Pack (1 hectare)

- 1 x Nimble Pro 3L
- 3 x Pot Carb Max 10L
- 16 x Sustane 5-2-4+Fe 22.7kg

PACK 2

Liquid Pack (1 hectare)

- 1 x Nimble Pro 3L
- 3 x Pot Carb Max 10L
- 1 x Pure Kelp 4L

LOW SALT INDEX

CARBON RICH

ROOT ENHANCER

SOIL HEALTH

4-6 WEEKS

PACK 1 £995 +VAT

PACK 2 £795 +VAT

FREE! A pair of Turf Stress Detection Glasses with every pack order!

ADVANCE GRASS SOLUTIONS

Summer Stress Reduction

Recent research has shown that both Poa and Bent are far less susceptible to anthracnose damage when leaf tissue levels of potassium are higher. Many cheap potassium sources such as potassium chloride have a very high salt index (116.3) and the potential to scorch during warm summer days is very high.

Pot Carb Max utilises ultra-low salt index (4.75) potassium carbonate to give a rapid, plant-friendly uptake of potassium directly into the leaf to reduce drought and traffic stress, while preventing anthracnose damage from taking hold.

Pure Kelp is a 100% concentrated seaweed extract of Ecklonia maxima proven to increase root growth and reduce plant stress. Trials show plants treated with Ecklonia maxima concentrates are more resistant to pathogens, insect pests and diseases. It is a perfect tank-mix partner with Pot Carb Max as a pre-anthracnose prevention and turf health booster.

Nimble Pro (156g/l Propiconazole) is now the go-to curative and preventative for anthracnose. Its' systemic action prevents the growth of fungal cell walls, preventing pathogens spreading into the plant, stopping disease in its tracks.

Sustane 5-2-4+Fe is one of the best selling organic fertilisers in the world. Thousands of turf managers around the globe trust in its quality and ability to produce healthy, disease-free turf. A balanced NPK plus 2% organically chelated iron combined with elevated levels of calcium and humic acid mean it is proven in many independent tests to improve health and reduce disease. The unique Sustane aerobic composting process delivers a low-salt, high-carbon product proven in STRI trials to significantly reduce anthracnose incidence:

Effect of Suståne 5-2-4+Fe on incidences of Anthracnose
