ADVANCE GRASS SOLUTIONS

Sustane 5.2.4

SUSTANE Naturally...

Sustane natural fertilisers have hundreds of independent research papers confirming their positive effects on disease reduction and plant & soil health. 5.2.4+Fe is an all-year round fertiliser for fine turf with STRI trials confirming significant reduction in both microdochium and anthracnose.

STRI

- 70% slow-release organic N to give low-yield, healthy surfaces with reduced disease.
- Increase in root development.
- Increases nutrient and water-holding capacity of the soil.
- Enhanced suppression of a wide range of diseases.
- Increased soil porosity and stability for greater root development and water holding capacity.
- Superb autumn & winter dormant feed giving natural disease suppression, excellent colour, high quality surfaces and improved soil health.
- Instant green-up effect from organically chelated iron + 30% water soluble nitrogen

				Nutrient Applied for 35g/m²			Accupro Setting for 35g/m²	
Product	Pack Size	Rate	Longevity	N	P	K	Single	Double
Sustane 5.2.4	22.7kg	35-50g/m²	4-6 weeks	17.5	7	14	7, R	7, N

Sustane 5.2.4

- Fine grade granules disperse quickly into the turf surface with minimal pick-up or surface disruption.
- Sustane's unique composting process maximizes nutrient delivery – minimal losses from leaching, volatilization or immobilization.
- Maximum Species Richness Diversity (SRD) and minimum Biological Oxygen Demand (BOD) improves soil microbiological balance.
- 3% Calcium and 8% Humic Acid to boost plant and soil health. Humic acid helps to condition soil and allows plants to make better use of nutrients in the soil whilst using less energy.
- Can be worked straight into the rootzone after aeration or used regularly throughout the year.
- Works extremely economically and effectively in combination with Growth Products liquids.

Issue	Suggested Solutions
Organic programme for high quality, disease-free greens.	Use Sustane fertilisers as base feeds and soil amendments in combination with Growth Products liquids. Ask your AGS Technical Sales Manager for a programmed approach to your individual circumstances.
Turf prone to anthracnose.	Apply Sustane 5.2.4 before the expected stress period to pre- condition the plant and soil. Use in combination with TKO Phosphite to help the plant fight infection naturally.
Turf surfaces looking weak and disease prone in autumn/ winter	Apply Sustane 5.2.4 in late summer/early autumn to boost health and again in early winter as a winter dormant feed to maintain plant health and reduce disease.
