

An economic all-year-round surfactant for tees, surrounds, fairways and sports pitches. InfloForce aids penetration of water through the surface and aids the even distribution of plant-available moisture throughout the rootzone.

Acts as a penetrant in winter while also preventing hydrophobicity during summer months. Great product to use on fairways at any time of year to promote recovery from drought and help the establishment of overseeded areas.

InfloForce also has a residual surfactant and dew dispersant effect. Designed for outfield areas due to its ability to help water penetrate through thatch layers and avoid run-off but can also be used on fine turf as a cost-effective surfactant for reduction on localised dry patch.

- Penetrant and residual wetting action.
- Maximise the benefits of all applied irrigation or natural rainfall.
- Excellent re-wetting action. Use on dry areas to restore moisture levels following drought or irrigation failure.
- Use on slopes or around bunker banks to prevent known hot-spots from burning off in summer.
