

Advance Zeolite amendment is a naturally occurring non-toxic mineral rock of volcanic origin. It has the ability to absorb and retain water and via its unique crystalline structure, it releases nutrient into the rootzone when the plant demands

Zeolite is a unique material in that can be used as a soil amendment for both drainage and water retainment. It's properties of holding onto optimal water content and then releasing when full means that a more steady, constant volumetric water content can be maintained in your rootzone.

Product	Pack Size	Rate
ZeoLite	25kg or 1000kg bulk bags	70 - 140g/m ²

- Boosts cation exchange capacity.
- Improves percolation rates.
- Relieves compaction.
- 100% natural - long lasting.

Issue	Suggested Solutions
Wet areas on golf greens, goalmouths or any turf area.	Spike the area with as large and deep a tine as possible and brush zeolite down the holes.
Construction of a new football pitch.	Mix in 15 - 50 tonnes of zeolite with the top 4- 6 inches of rootzone. Make sure the zeolite is evenly distributed throughout the depth of the rootzone and not left in bands.
Sports turf surfaces looking to firm up the upper layers of a surface.	Apply 70 - 140g/m ² of Advance Zeolite on a monthly basis throughout the growing season or as often as required.
