IF YOU CAN MEASURE IT
YOU CAN MANAGE IT

ProPitch helps stadiums, training grounds, leagues and associations improve pitch quality, as they seek to maximise their assets through increased playing time or events.

The impact of this, whilst maintaining the playing quality, consistency and venue brand, is a fine balance.

"I have worked with ProPitch on both the FIFA Pitch Improvement Program and Groupama Arena Concert Events. They are one of the most professional and knowledgeable companies I have met, working to the highest standards and delivering amazing results. They do all this but most importantly are good people, helping us with a smile and honesty. They have had a big impact on my professional career in Hungary."

Zoltan Laczko II

Head Groundsman Groupama Arena-Budapest
Vice President of Hungarian Groundsmen Association

Achieving a **consistent quality standard** for match and training pitches, supports increased performance and player welfare.

If you can measure it, you can manage it.

ProPitch is the market leading, independent, performance quality assurance solution for natural turf pitches.

Our innovative system provides a series of pitch tests that put playing quality at its core. The tests are scored and weighted, to provide a rating system, making it simple to monitor pitch improvement. Quality assurance is an essential part of the natural turf pitch development and management process, guaranteeing its performance.

"Propitch did more than deliver the highest quality UEFA pitch standards for the Champions League Cup Final. They organised and lead our team positively through the increased responsibility. Their ability to mentor, teach and work practically with us in a friendly way, would have me recommend them to everyone."

Christian Gambini //

Head Groundsman, San Siro Stadium, UEFA Champions League Final 2016

When you are an owner, investor or manager **quality assurance is at the heart of any decision you make**, whether it's for an event, new pitch construction, renovation or maintenance.

04 DESIGN & CONSTRUCTION

- Site appraisal and feasibility study
- Design and tendering specifications for construction & drainage
- Site works management

05 EDUCATION & TRAINING

- Coaching and mentoring

SELF-ASSESSMENT KIT OPTIONS

Grounds Manager Self-Assessment Kit

ProPitch offer two different testing kit options for purchase, similar to the kits used by ProPitch staff undertaking pitch assessments. A ProPitch Premium and standard option. The Premium kit offers an upgraded moisture meter with GPS capabilities supplied by POGO Turf Pro. Both kit options are supplied with our industry-leading Light weight Rotational Resistance (LwRR) testing equipment to provide the industry with the first consistent measure of rotational resistance.

The ProPitch Self-Assessment

The ProPitch self-assessment allows grounds managers to monitor pitch readings and adapt maintenance techniques to produce the perfect pitch. It can also be used in conjunction with the exclusive ProPitch Grounds Manager testing kits and Propitch Application & Data Portal. The Self-Assessment includes:

- Traction
- Surface Levels
- Hardness
- Infiltration
- Moisture Reading
- Total Ground Cover %
- Weed %
- Sward Height
- Mass Root Depth
- Thatch Depth
- Surface Organic Debris
- Appearance
- Sward Colour
- Disease %
- Insect / Pest %

STANDARD ASSESSMENT

ProPitch 15

This is our standard assessment. It can also be undertaken internally with the use of our ProPitch testing kits and ProPitch Application and data portal.

- Ball Rebound
- Ball Roll
- Traction
- Surface Levels
- Hardness
- Infiltration
- Moisture Reading
- Total Ground Cover %
- Weed %
- Sward Height
- Mass Root Depth
- Thatch Depth
- Surface Organic Debris
- Appearance
- Sward Colour
- Disease %
- Insect / Pest %

ADVANCED ASSESSMENT

ProPitch 18

This is our most advanced testing assessment. It includes the PP15 with the AAA Assessment.

- Surface Deformation
- Shock Absorption
- Energy Restitution

AAA ASSESSMENT

- Ball Rebound
- Ball Roll
- Traction
- Surface Levels
- Hardness
- Infiltration
- Moisture Reading
- Total Ground Cover %
- Weed %
- Sward Height
- Mass Root Depth
- Thatch Depth
- Surface Organic Debris
- Appearance
- Sward Colour
- Disease %
- Insect / Pest %
