Polyon 20.5.8

Polyon controlled-release fertilisers offer the latest technology to turf professionals, with the patented polyurethane membrane offering consistent, predictable feeding for months at a time.

Independent research shows Polyon fertilisers maximise efficiency of nutrient use by plants, minimising waste and maximising turf performance.

- 3-4 month longevity from controlled-release technology.
- High N formulation ideal for health and presentation in the growing season.
- Small prill size gives flexibility of application rates and areas.
- Fast-start portion for immediate response.
- 2½1 N:K ratio with added magnesium and calcium for a total plant health package.
- Fewer applications saving labour with no unnecessary growth surges.

				Nutrient Applied for 35g/m²			Accupro Setting for 35g/m²	
Product	Pack Size	Rate	Longevity	N	P	K	Single	Double
Polyon 20.5.8	25kg	25-40g/m²	3-4months	70	17.5	28	5, Q	5, M½

Polyon 20.5.8

- Can be applied in cold conditions ahead of plant demand – nutrient release is controlled by soil temperature.
- The exclusive, polymer membrane coats each granule to provide the ultimate in consistent, healthy growth.
- Incorporates calcium to strengthen plant cell membranes, increase cell division and improve plant vigour and stiffness.
- Added Magnesium for improved colour and plant strength.
- Ultimate in controlled-release helps prevent excess growth, even after heavy rainfall.
- 65% controlled release.

Issue	Suggested Solutions
Turf needs a pick up in growth in late summer/autumn. **Plants looking weakened in cool soils.**	Apply Polyon 20.5.8 at 35g/m^2 for recovery of winter damage and spring and early summer health. For complete plant strength and performance, consult your Regional Technical Sales Manager for a detailed programme using Sustane, Growth Products and Polyon granular and liquid plant health products.
Underlying 'base feed' on top-spec high sand constructions.	Apply Polyon 20.5.8 at 20-40g/m^2 in the growing season every 4-12 weeks. Adjust application rates and timings to suit individual sites.
Golf tees, fairways and surrounds in need of early season boost combined with long term nutrient boost	Apply Polyon 20.5.8 at 35g/m^2 in early spring to pick up growth and provide nutrition for recovery and infill.
