

Enhance 5.0.0 +5%Fe

A complexed liquid nitrogen-iron formulation that is easily tank-mixed with selective herbicides and PGR's such as Primo Maxx or Maintain NT for economic use on large outfield areas such as fairways, tees, semi-rough and sports pitches.

Enhance utilises Ferric Ammonium Citrate to deliver a non-staining dark green turf response without excess growth. An early season mix of Enhance + Maintain NT will provide a control of any spring flush of growth alongside a thickening of the sward and an aesthetically pleasing deep green colour.

Unlike soluble ferrous sulphate, Enhance will not burn, blacken or scorch leaf tips to deliver a consistent, safe green-up. Large areas such as fairways can have early season growth re-directed into the roots using the Enhance/Maintain NT mix. By adding in an appropriate selective herbicide when growth is strong, a three-in-one tank mix can be made. By controlling growth and applying a weedkiller in one application, the chemical will not be cut off and better weed control can be achieved.

- Added nitrogen enhances the uptake and efficacy of selective weedkiller applications.
- Low water volumes can be used safely to make economical large area applications.
- Can be used any time of year to improve colour with no flush of growth.

Enhance 5.0.0 +5%Fe

- Tank mixable with PGR's and selective weedkillers.
- Safe to use at a low water rate – apply as a fine spray to coat the leaves.
- Economic way to improve aesthetic appeal without increased growth and labour-consuming mowing.
- One 200 litre drum covers 5 – 10 hectares.
- Excellent colour from formulation maximising rapid uptake of iron and nitrogen.

- Enhance safely tank-mixes with the majority of other fertilisers, biostimulants, PGR's and herbicides, but always carry out a jar test first to assess suitability of each mix.

Issue	Suggested Solutions
Fairways on nutrient-rich soils in need of colour boost combined with growth control.	Apply Enhance at 20-40l/ha in combination with Maintain NT at 1 – 1.5l/ha every 4-8 weeks as required. Save more applications by adding in a selective herbicide to improve colour, reduce unwanted top growth and control weeds with one spray.
Sports pitches needing a colour boost pre-match or when growth is good, but appearance needs improving.	Apply Enhance at 20-40l/ha 2-3 days before a match. Add in Primo Maxx/Maintain NT at 1-1.5l/ha if growth control is required at the same time.
Tees, surrounds, cricket outfield looking for improvement in presentation.	Apply Enhance at 240l/ha in March/April and follow up with applications every 4-8 weeks throughout the season.
