

Utilising market-leading surfactant research, HydroForce is based on non-ionic surfactant reverse block co-polymer technology. Ideal for programmed use on fine turf and sports pitches.

Can be tank-mixed with many soil-targeted products such as seaweeds, etc. Safe to use without the need for watering in - no danger of scorch.

By maintaining the correct water levels in your soil, the air:water balance allows for higher microbial activity and allows roots to penetrate deep into the profile. Optimising soil moisture levels also bring firmer surfaces and smoother playing surfaces.

- Helps prevent localised dry patch from forming - prevention is better than cure.
- Flexibility of application rates for different situations.
- Keeps soil moisture levels high enough to support perennial grasses, but low enough to discourage Poa annua.
- Can be applied early in the year - February onwards - to set up your soils for the year to hold the correct moisture levels all summer long.

Product	Pack Size	Rate	Water Volume
