

Prime your turf for the spring season ahead...

Combining the very latest in granular and liquid feeding, ensuring your turf is ready for play.

AGS Spring Prime Package

Prime your turf for the start of the spring season.

A suite of market leading products designed to support turf through winter to spring transition, exclusive to AGS.

- Boost early growth using plant available sources of nitrogen.
- Improve turf density and wear tolerance
- Remove organic residues from the rootzone, priming your soil profile for enhanced nutrient and water uptake.
- Create an environment for uniform growth for all grass species.
- Reduce reliance on fungicides with emphasis on plant health.

Sustane 10.1.4 1% Ca, 7% Humic Acid

Sustane adds and maintains high microbial diversity in your soils via it's unique 26-week aerobically stabilised compost, which is rich in microbial species diversity (CFU).

10-1-4 has additional ammonium sulphate (75%) for cool season growth and colour with 7% Humic Acid. Ideal for surface recovery and soil conditioning.

Since 1980 over 500 independent studies on Sustane place it at the top of the most researched organic fertilisers in the world.

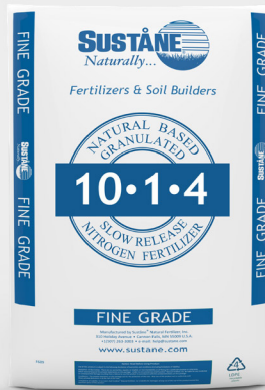

Figure 1: The unique composting process of Sustane

NPK at 35g/m² (Kg/ha)

Analysis	Pack Size	Rate	Longevity	N	P	K
10.1.4	22.7kg	25-50g/m ²	4-6 weeks	35	3.5	14

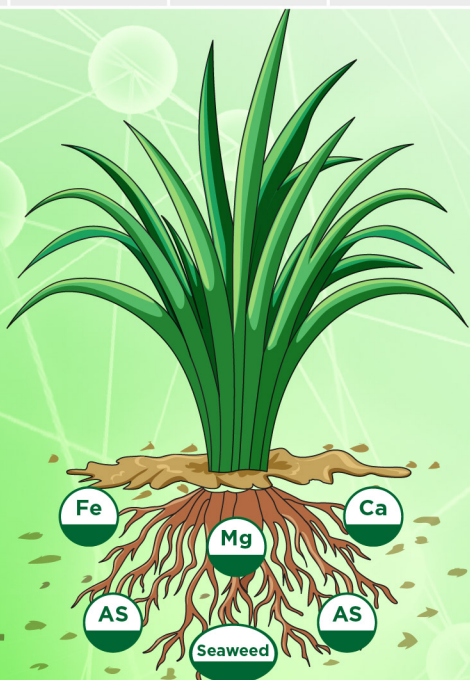

Figure 2: Elemental input of 10.4.4

Growth Products 10.4.4 +Ca+Mg+Seaweed

A high quality, micro homogenous fertiliser for use in cool temperatures.

Plant available sources of nitrogen are utilised alongside magnesium, iron, calcium and seaweed, for added benefit at root level.

NPK at 35g/m² (Kg/ha)

Analysis	Pack Size	Rate	Longevity	N	P	K
10.4.4	25kg	20-45g/m ²	4-6 weeks	35	14	14

Spring Prime Package

Growth Products Essential 1.0.1

Rejuvenate your winter soil structure with Essential 1.0.1.

Essential is a 100% natural organic product derived from plant and vegetative extracts that provide a rich carbon source of organic matter.

1-0-1 contains a high percentage of active, soluble humates, plant extracts, cellulose fibre and a natural wetting agent, which are critical to maintain healthy soil.

Proven to reduce compaction and improve cation exchange capacity in sand dominant systems.

Clean and prime your profiles for the season ahead with Essential 1-0-1 organic biostimulant.

Essential Contains

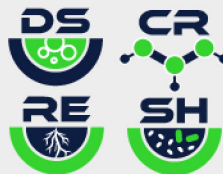

Gibberlic Acid
 Natural wetting agent
 Magnesium
 Kelp
 Humic Acid
 Riboflavin B2
 Calcium
 Vitamin B6
 Potassium
 Nitrogen
 Lignin
 Ash
 Cabohydrates
 21 L-Amino Acids
 Mono / Disaccharides

Figure 3: Extensive list of Essential ingredients

Analysis	Pack Size	Rate	Water Volume
1.0.1	4ltr & 10ltr	4-10ltrs/ha	200-600ltr/ha

Figure 4: Improved chlorophyll in Turf Grass (Fescue)

LamVita

LamVita® is proven to enhance chlorophyll production and photosynthetic activity of turf grasses in early spring.

Stabilization of chlorophyll results in darker greener leaves, improving visual quality of turfgrass.

Loss of grass cover due to low light and cold conditions is a significant problem in sports turf situations - golf and stadia.

LamVita® helps counteract these negative effects on turfgrass by enhancing chlorophyll production. LamVita® applications will increase photosynthesis, growth rates, leaf thickness and stomatal density, culminating in improved grass, cover and quality.

Analysis	Pack Size	Rate	Water Volume
LamVita	10ltr	2.5ltrs/ha	300-500ltr/ha

Speak to your AGS Regional Manager about our comprehensive agronomy support and product supply package, utilising the very latest in organic and biostimulant technology.
